Aspiring Software Engineer intern focused on building strong technical foundations through mentorship and real-world projects. I aim to master C++, C#, and game engines (Unity/Unreal) while achieving professional English certification to contribute meaningful value to high-impact software products.

EDUCATION

Bachelor's degree - Information Technology

Aug 2023 - Present

University of Transport Ho Chi Minh City

GPA: 3.1 (7.5/10)

Relevant Coursework: DSA, OOP, Programming Techniques, Discrete Mathematics, Software Engineering

Intermediate Degree - IT (Software Application)

Aug 2020 - Jul 2022

Ho Chi Minh Vocational College

GPA: 8.7/10

Top Graduate and Class President.

PROJECTS

NeoShop E-commerce

Jan 2026 - Mar 2026

Role: Fullstack Developer

Team size: 1

Tech stacks: ReactJS, Java Spring Boot, PostgreSQL, WebSocket (STOMP), VNPay integration, MoMo sandbox.

Description: A specialized e-commerce system for digital products, supporting automated transactions and next-time communication.

Main tasks:

- Develop a full-stack system using ReactJS and Spring Boot (RESTful).
- Implement multi-layered security with JWT, Google OAuth2, and role-based access control (RBAC).
- Implement automated product code and action sending using Context API and LocalStorage.
- Manage development using Docker Compose and automate API documentation with Swagger.

Game Caro

Dec 2025 - Feb 2026

Role: Desktop/Game Developer

Team size: 2

Tech stacks: C# .NET Windows Forms, Socket (TCP), SunnyUI, AI Heuristic.

Description: Game CARO with LAN multiplayer and AI single-player modes.

Main tasks:

- Engineered real-time multiplayer Gomoku application using C# .NET Windows Forms and Socket (TCP), ensuring low-latency data transmission across local networks.
- Architected a robust Client-Server model to synchronize gameplay states and live chat, maintaining 100% match consistency between distributed nodes.
- Developed a competitive AI engine for the single-player mode using heuristic search algorithms to simulate strategic human-like attack and defense maneuvers.
- Implemented a persistent data management system via FileStream, isolating user configurations and progress records for distinct Local and LAN environments.
- Integrated SunnyUI framework to overhaul the interface with modern Flat Design, board animations, and real-time synchronization timers, improving overall visual UX.
- Designed high-performance algorithms for chessboard logic, win/loss conditions, and multi-step Undo/Redo functionality to enhance gameplay control.

EV Co-ownership

Sep 2025 - Nov 2025

Role: System Architect & Backend Developer

Team size: 6

Tech stacks: Java, Spring Boot 3, Spring Data JPA, MySQL, Redis, NiFi, Spring Cloud Gateway, Docker.

Description: Electric Vehicle (EV) Co-ownership Management System

Main tasks:

- Develop a co-ownership management platform for electric vehicles (EVs) that supports vehicle sharing, automates overall management, and enables transparent group operations.
- Build the backend using Spring Boot, Spring Data JPA for data governance, and Flyway for versioning database management.
- Deploy Spring Cloud Gateway to distribute requests and enhance security for the API system.
- Set up a JWT-based authentication system that integrates OTP codes via email to maximize security for user login and access.
- Use Apache NiFi to handle complex data flow links to vehicle usage history and perform additional algorithmic analysis.
- Performance is prioritized using Redis (caching and session storage), reducing response times for modular administration platforms.
- Infrastructure management is achieved using Docker and Docker Compose, ensuring consistency across development and operational environments.
- A comprehensive Administration module design includes a Symbol System for team decision-making and a Management Ledger to ensure financial transparency.

CERTIFICATIONS

Gemini Certified University Student (Credential ID: 175119715)  by Google for Education	Feb 2026
Gemini Certified Educator (Credential ID: 169275702)  by Google for Education	Dec 2025

SKILLS

- Languages:** C++, C#, Java, HTML5, CSS3, JavaScript, TypeScript
- Frameworks/Libraries:** React, TailwindCSS, Bootstrap, Spring Boot, .NET/Windows Forms
- Databases & DevOps:** PostgreSQL, MySQL, SQL Server, Docker, Git, Vercel, Render, Railway
- System Design & Architecture:** Microservices (Basic), Monolithic Architecture, RESTful API Design, System Scalability (Basic)
- Software Design & Modeling:** UML, OOP Design Principles, Design Patterns (Basic)
- Tools & Development Environment:** VS Code, Postman, Figma, AI MCP (ChatGPT, Claude, Gemini, Antigravity, Stitch)
- Soft Skills:** Leadership, Problem-Solving, Teamwork, Analytical Thinking, Critical Thinking

LANGUAGES

Vietnamese (Native proficiency) • **English** (Limited working proficiency)
